

## **Installing xlogger in Windows 10**

1. Ensure that Excel is not running.
2. Insert the USB stick. Use File Explorer to locate the USB drive and double click on Setup to install the software.
3. "Allow app from unknown publisher" click "Yes"
4. In Program Files open the xlogger folder
5. Double click the xlogger (Microsoft Excel add-in) at the bottom of the list
6. Excel will open and you will need to accept macros when prompted

You should now see a new tab labelled Add-Ins at the right hand side of the header. This will now appear every time Excel is opened.

Click on this and a drop down menu will appear at top left of the screen

Start Xlogger and follow the instructions in the User Guide
